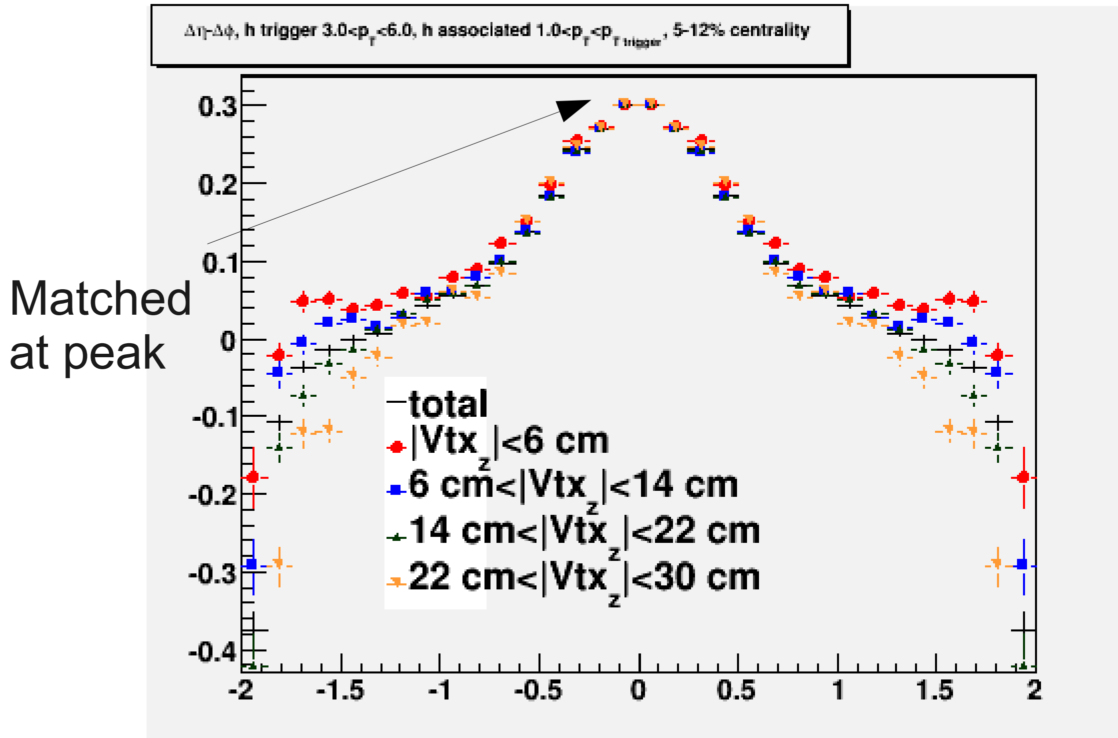
Collision system and energy dependence of di-hadron correlations

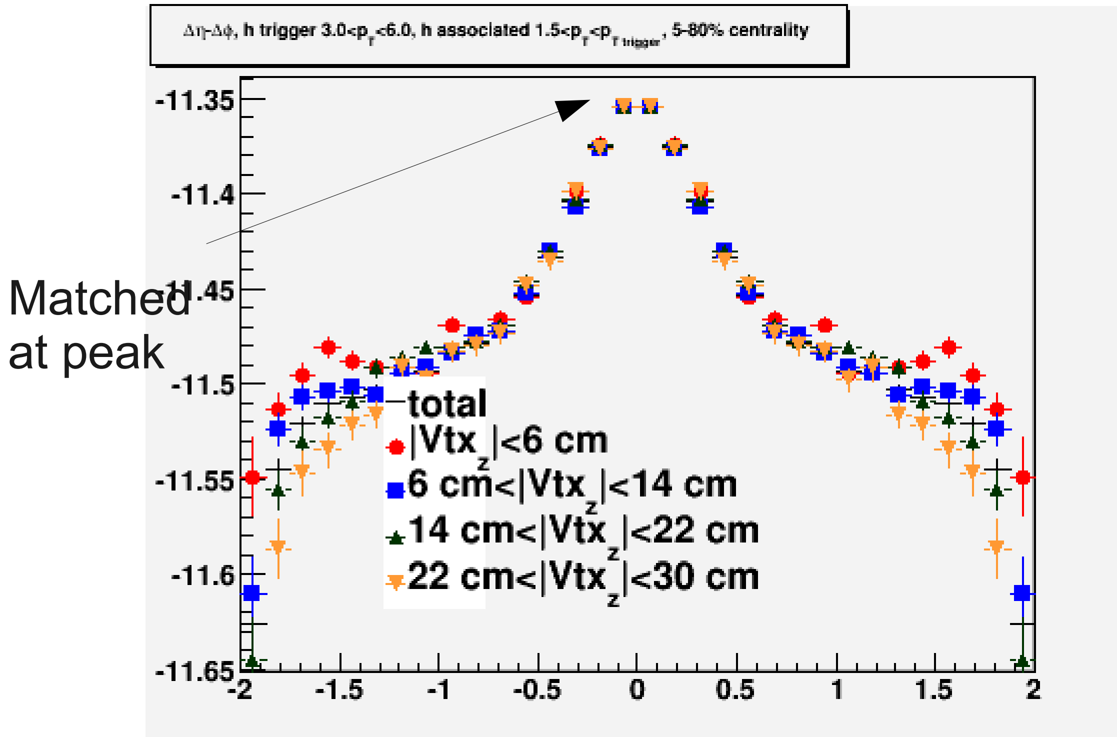
PAs: Christine Nattrass, Jana Bielcikova,
Helen Caines, Jörn Putschke

1.0<ptassoc<3; 3<pttrig<10 GeV/c



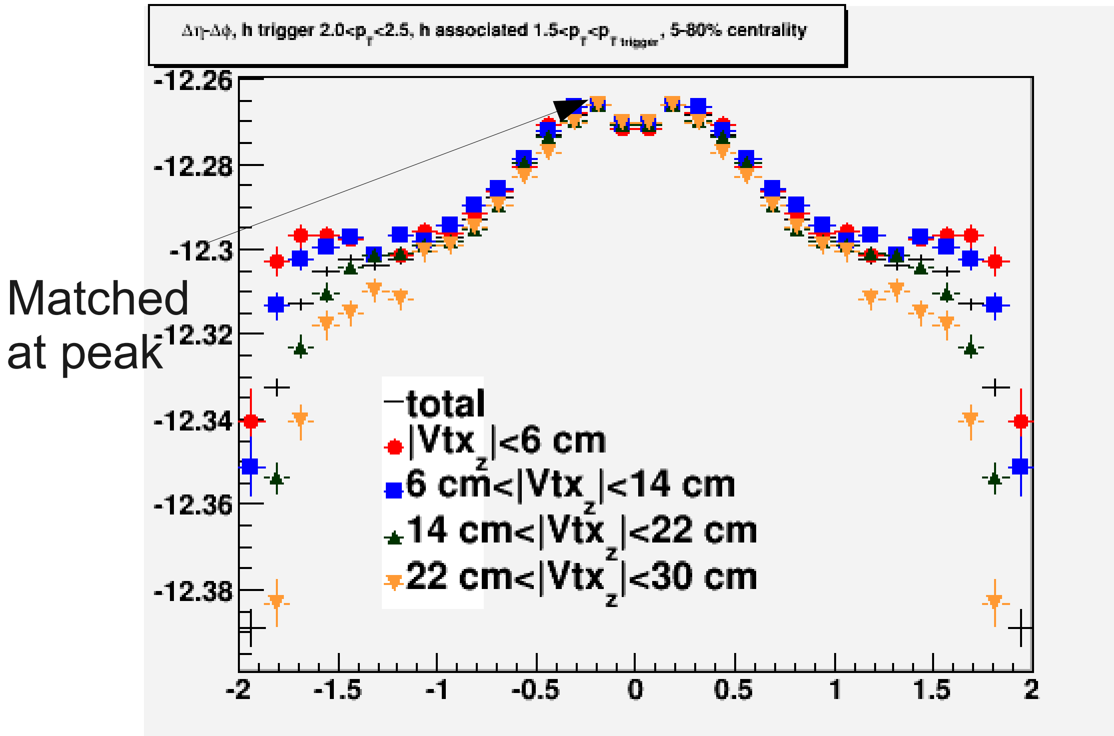
- Width:
  - Difference between smallest vtx z bin and total: 5%
- Yield: Re-evaluated, had put vtx z-dependent efficiency in wrong direction
  - Difference between smallest vtx z bin and total: 16%

1.5<ptassoc<pttrig; 3<pttrig<6 GeV/c



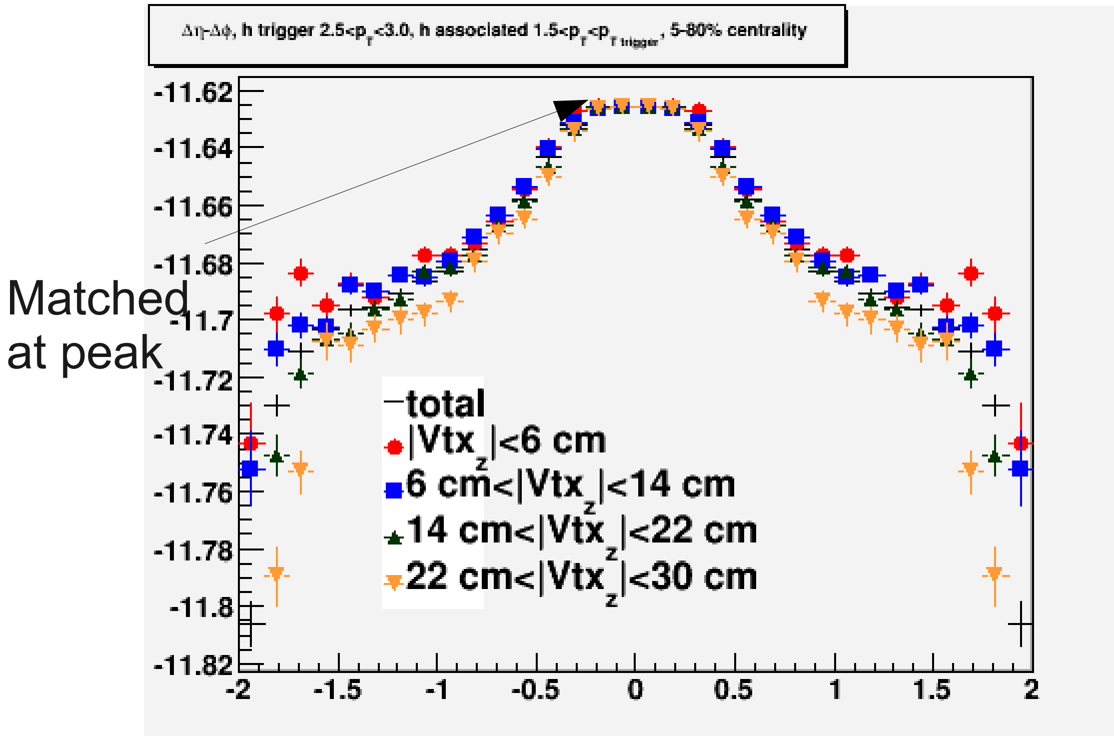
- Width:
  - Difference between smallest vtx z bin and total: 6%
- Yield:
  - Difference between smallest vtx z bin and total: 9%
- Above this pTtrig this exercise becomes dominated by statistical errors

1.5<ptassoc<pttrig; 2<pttrig<2.5 GeV/c



- Width:
  - Difference between smallest vtx z bin and total: 10%
- Yield:
  - Difference between smallest vtx z bin and total: 27%

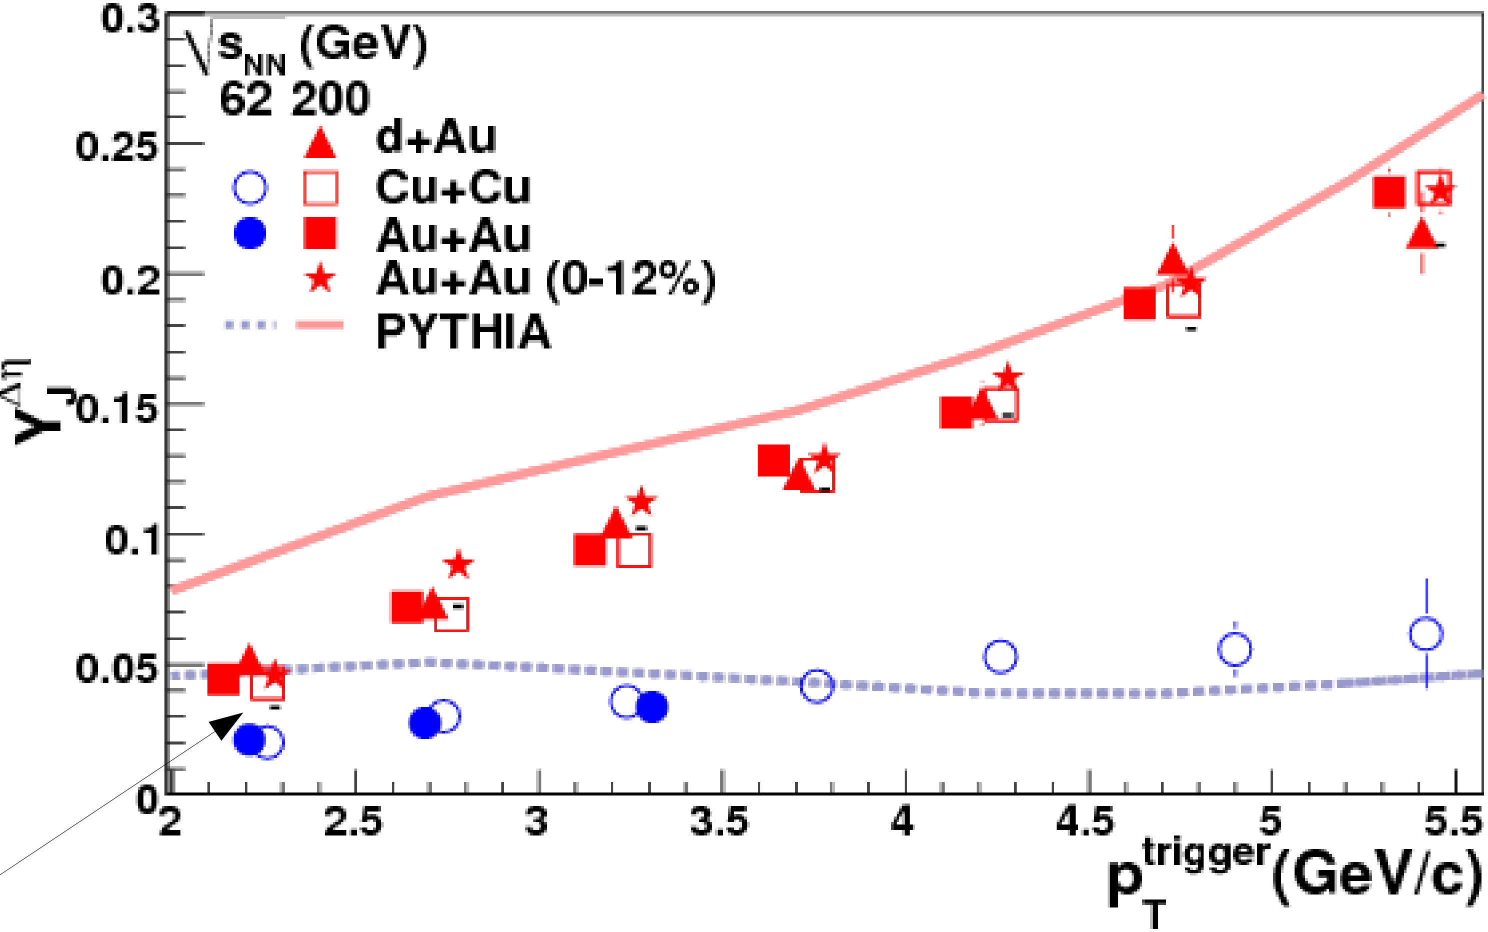
1.5<ptassoc<pttrig; 2.5<pttrig<3 GeV/c



- Width:
  - Difference between smallest vtx z bin and total: 6%
- Yield:
  - Difference between smallest vtx z bin and total: 18%

Summary of proposed systematic errors

- Width: 6% except for pttrig=2-2.5 GeV/c where it is 10%
- Yield:
  - 1.5>ptassoc, 3-6 GeV/c trig: 9% (0.009)
  - 1.0>ptassoc, 3-6 GeV/c trig: 16% (0.04)
  - 1.5>ptassoc, 2-2.5 GeV/c trig: 27% (0.013)
  - 1.5>ptassoc, 2.5-3.0 GeV/c trig: 18% (0.015)



Error bars – was not able to get them to draw well in a short period of time

Current status of full mixed events

- Au+Au 200 0-12%: 80% done. One more week
  - Currently rerunning jobs that failed the first time
- Au+Au 200 Min Bias: 5% done. Two weeks?
  - Largely due to low load on RCF
- Cu+Cu & d+Au 200, Cu+Cu & Au+Au 62: Not started. One additional month?
  - Expect lower throughput after QM
