

# Near-side azimuthal and pseudo-rapidity correlations of neutral strange baryons and mesons in d+Au, Cu+Cu and Au+Au collisions at $\sqrt{s_{NN}} = 200$ GeV

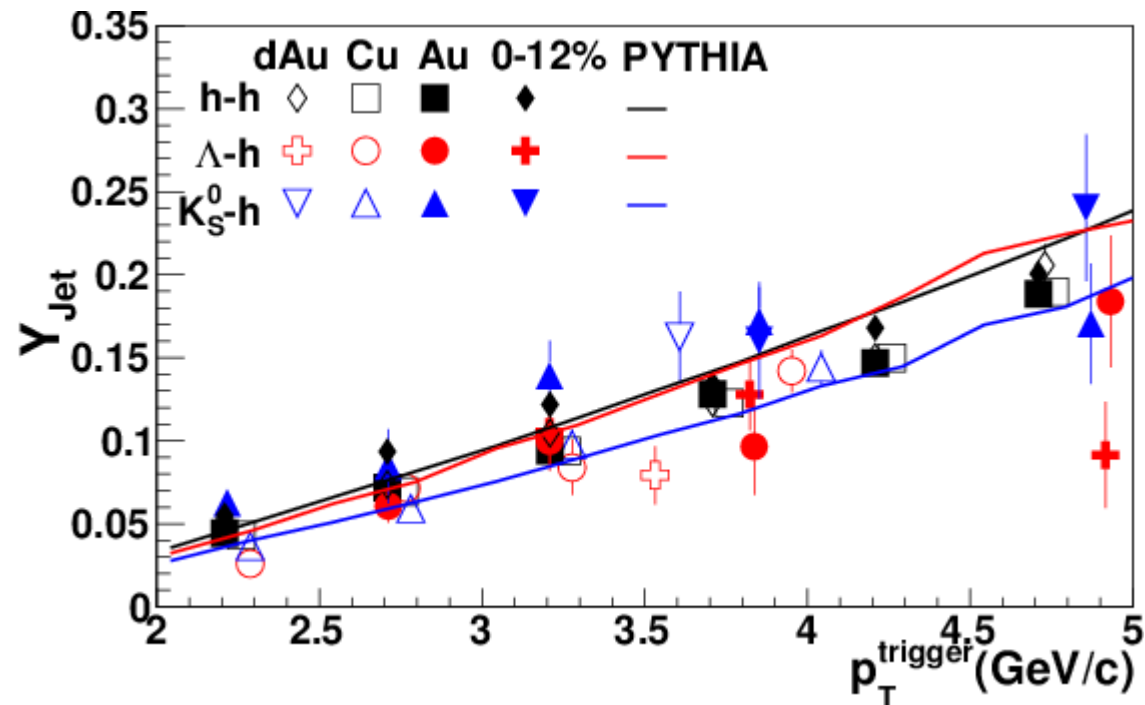

- PAs: **Jana Bielcikova, Christine Nattrass, Betty Abelev, Helen Caines, Rene Bellwied, Marek Bombara, Leon Gaillard**
- Target journal: PRC
- Paper draft and analysis note: See <http://rhig.physics.yale.edu/~nattrass/Research/web/paper/ParticleTypeAndSystemDependence.html>
- Asking to form the GPC

# Figure 1:

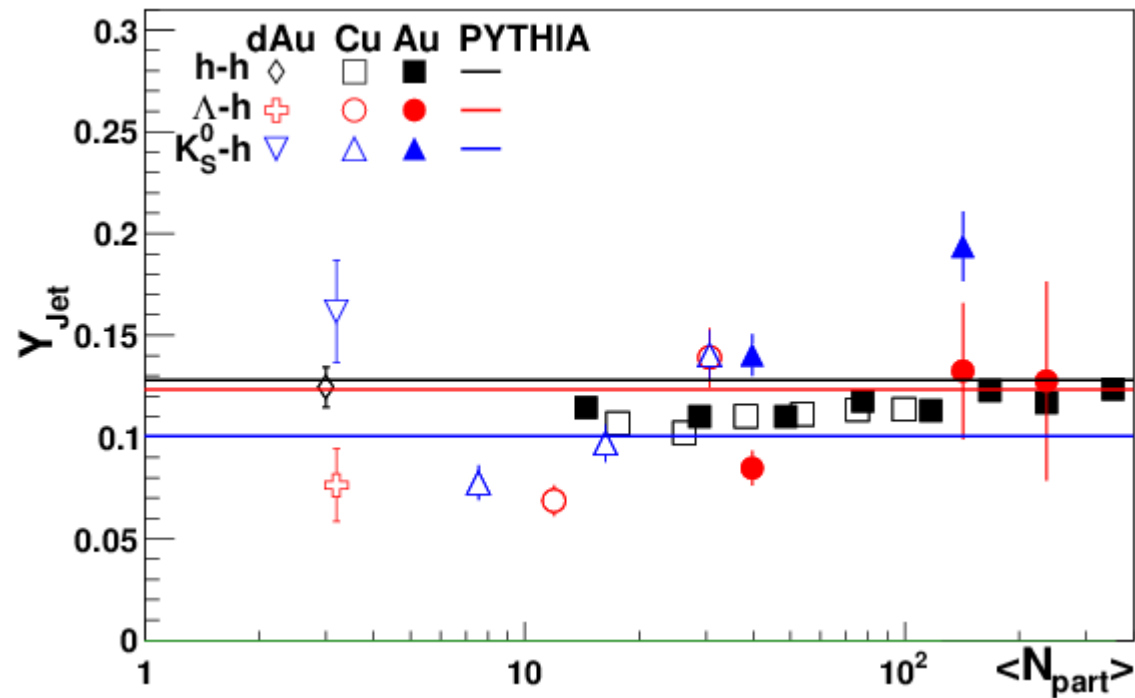

Goal: Show sample correlations

# Figure 2:

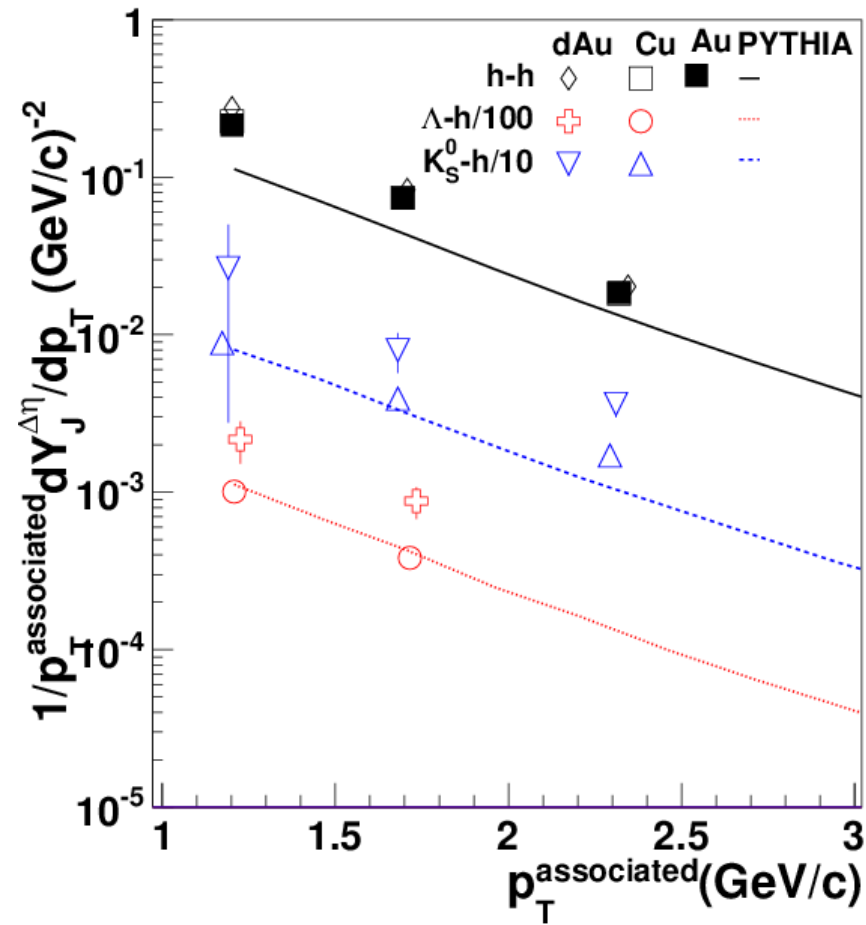

Goal: Demonstrate minimal trigger  $p_T$  dependence

# Figure 3:

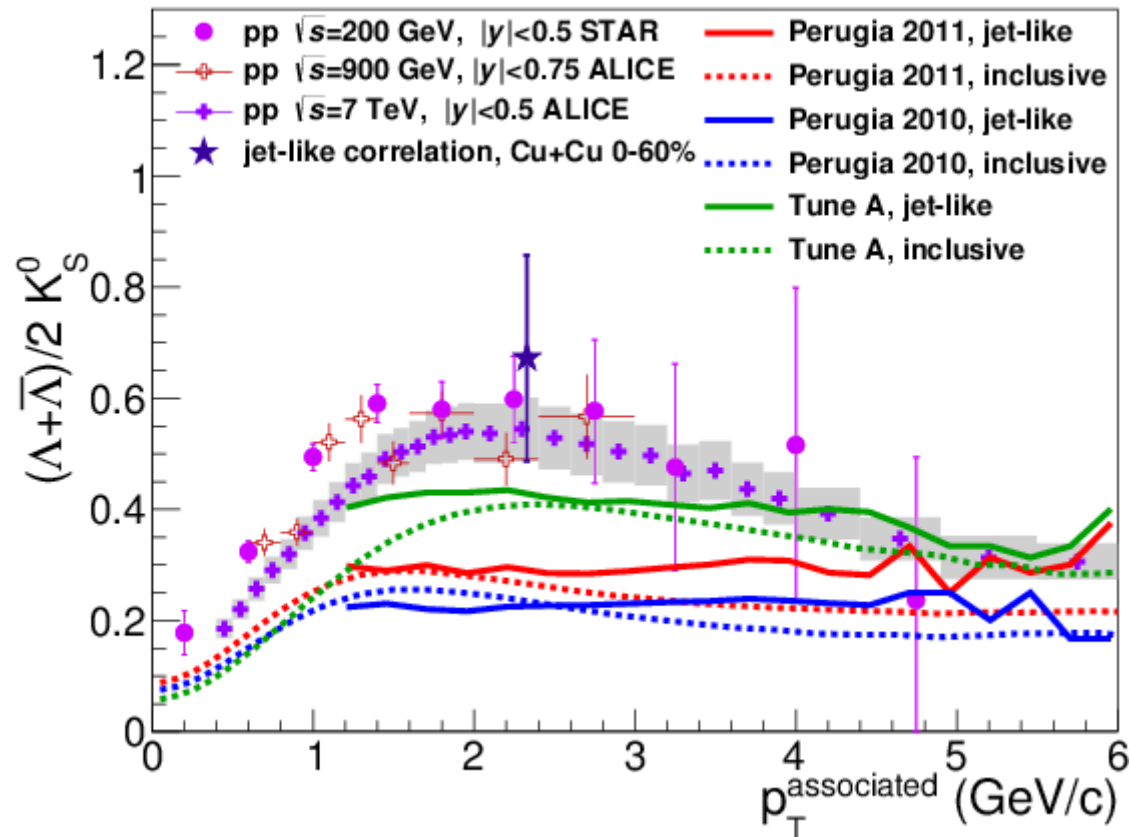

Goal: Investigate centrality dependence

# Figure 4:

Goal: Investigate  $p_T$  associated dependence

# Figure 5:

Goal: Investigate production mechanisms using composition of jet-like correlation

# Outstanding issues:

- STAR reference data in Fig. 5: published version?
- Text improvements?
